Regarding Claim 12, a phase advancing portion for receiving two output signals from the position detecting portion and for producing two phase advanced output signals in which the phases of the output signals are advanced where the includes a differential amplifier made of an operational amplifier, a capacitor and a resistor, one of the outputs of the position detecting portion is supplied to the noninverting input terminal of the differential amplifier and a signal generated by dividing a voltage between the other output of the position detecting portion and the output of the differential amplifier by the capacitor and the resistor is supplied to the inverting input terminal of the differential amplifier.
